Abstract: The Clean Watersheds Needs Survey (CWNS) is required by Clean Water Act (CWA) Sections 205(a) and 516. It is a periodic inventory of existing and planned publicly owned wastewater conveyance and treatment facilities, combined sewer overflow correction, stormwater management and other water pollution control facilities in the United States, as well as an estimate of how many of these facilities need to be built. The CWNS is a joint effort between EPA and the states. The CWNS collects cost and technical data from states that are associated with publicly owned treatment works (POTWs) and other water pollution control facilities, existing and planned. The respondents who provide this information to EPA are state agencies responsible for environmental pollution control and local facility contacts who provide documentation to the states. Periodically, the states request data or documentation from contacts at the facility or local government level. These respondents are referred to as facilities.

No confidential information is used, nor is sensitive information protected from release under the Public Information Act. EPA achieves national consistency in the final results through the application of uniform guidelines and validation techniques.

Form Numbers: None.

Respondents/affected entities: States, Territories, and Local Facilities.

Respondent's obligation to respond: Voluntary.

Estimated number of respondents: 56 States and Territories, 5,349 Local Facilities (total).

Frequency of response: Every 4 years.

Total estimated burden: 9,645 hours (per year). Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$505,004 (per year), includes \$0 annualized capital or operation & maintenance costs.

Changes in Estimates: There is an increase of 541 hours and \$134,820 in the total estimated respondent burden compared with the ICR previously approved by OMB. This increase is based upon an increase in facility universe, as well as an adjustment in labor rates and benefits.

Dated: February 18, 2021.
